

TPC GROUP 14

Client Requirements

Functional, technical and success criteria

Client: SkillsTrack Training Centre

Project: Learner Support Portal

Programme: Technical Programming Cycle | September 2026

Client Requirements Document

- Project: Learner Support Portal
- Client: SkillsTrack Training Centre

Problem Statement

- Learners currently record goals, tasks, support bookings, and progress in separate documents and messages. Assessors struggle to track outstanding work, identify learners needing support, and monitor progress effectively.

Functional Requirements

- The portal must allow registered users to:
- Manage learning tasks (create, update, mark complete).
- Book support sessions with assessors.
- Review progress (visual progress tracking for learners and assessors).
- Access learning resources (documents, links, guides).
- Play a short coding game for practice.

User Roles

- Learners:
- Register/login securely.
- Manage personal tasks and goals.
- Book support sessions.
- Track their own progress.
- Access resources and coding game.
- Assessors:

- View learner progress dashboards.
- Identify outstanding tasks.
- Track which learners need support.
- Manage support bookings.

Technical Requirements

- Frontend: JavaScript for application logic.
- Backend/Database: Firebase for authentication, data storage, and hosting.
- Platform: Browser-based (desktop and mobile accessible).
- Security: User authentication, secure data handling, role-based access.

Constraints

- Must be lightweight and user-friendly.
- Must integrate seamlessly with Firebase services.
- Limited to short occupational programmes (not a full LMS).

Success Criteria

- Learners can manage all learning activities in one portal.
- Assessors can easily see outstanding work and learner progress.
- Portal improves efficiency compared to scattered documents/messages.
- Secure, reliable, and accessible system.
